

Accession groups from SNPs in each gene (PCA + Ward clustering) vs flowering date and photosensitivity

● Green point = photosensitive accession ● Orange point = non-photosensitive accession ■ Lower bar: green = % photosensitive ■ orange = % non-photosensitive

Points: green = photosensitive, orange = non-photosensitive. Lower bar = fraction photosensitive per group. Stars on ANOVA: * p<0.05, ** p<0.01, *** p<0.001, **** p<0.0001, ns = not significant (raw p; unadjusted for population structure).
